ENIYAN S

AERONAUTICAL ENGINEER

eniyansk7@gamil.com | +91 6383762232 | Chennai

Portfolio | www.linkedin.com/in/eniyan-sk

SUMMARY

Final-year Aeronautical Engineering student with hands-on project management, testing, and process engineering experience gained through internships at L&T and SAIL, across manufacturing, industrial operations, and quality-driven production environments. Proven self-starter with strong learning agility — quickly picked up ERP systems, automation tools, and Industry 4.0 technologies across two very different industrial settings. Comfortable presenting findings and recommendations to stakeholders, with a customer-focused approach to problem-solving and a track record of driving continuous improvement in cross-functional, global teams. Motivated to apply an analytical, sustainability-minded engineering foundation to support long-term productivity and growth in industrial and mining operations.

SKILLS

Core strength: continuous imporvemnt, Analytical Problem-Solving, Cross-Functional Collaboration, Stakeholder Communication
Engineering & Operations: Process Engineering, Project Management, Testing & Quality Assurance, Customer-Facing Support, Field Service Coordination, upply Chain & Sourcing, Procurement Support
Industrial Technology: Industry 4.0, Edge AI, Digital twin & IIoT, PLC / DCS & Industrial Automation, ERP & Digital Manufacturing
Engineering Tools: ANSYS, SOLIDWORKS, MATLAB

WORK EXPERIENCE

PROJECT MANGEMENT INTERN — Coimbatore, Tamil Nadu, India
Larsen & Toubro – Precision Engineering & Systems — *May 2026 - Jun 2026*

Supported defense manufacturing operations through production tracking, quality coordination, and process improvement, while building exposure to project management, customer engagement, and cross-functional engineering execution.

- Applied project management and process engineering discipline to drive manufacturing and production optimization for LCA Tejas wing components, improving shop-floor execution and throughput.
- Supported LCA Tejas wing-component manufacturing through production tracking, supply chain coordination, ERP validation, shop-floor monitoring, and process coordination in a customer-facing environment.
- Supported testing and quality control processes to meet aerospace-grade standards, strengthening process control, data review, and continuous improvement decisions through analytical problem-solving.
- Monitored quality control and process performance across production workflows, aligning with customer-focused standards, procurement checks, and spare part readiness.
- Collaborated with production, composite manufacturing, and quality teams on manufacturing processes, electrical interfaces, and quality requirements while contributing to global teaming and field service readiness.
- Developed "Resin Intelligence," an AI/NIR-based Industry 4.0 solution concept for real-time process monitoring, production optimization, and innovative solution development.

ENGINEERING INTERN — Salem,Tamilnadu, India
Steel Authority of India Limited (SAIL) – Salem Steel Plant — *May 2025 - Jun 2025*

Gained hands-on exposure to stainless steel production, including hot rolling, cold rolling, and heat-treatment operations in a large-scale industrial manufacturing environment.

- Supported production, quality assurance, process monitoring, and operational effectiveness, contributing to understanding of industrial manufacturing processes and requirements.
- Collaborated with engineering and cross-functional teams on plant operations, industrial safety, process optimization, problem-solving, and continuous improvement initiatives across the business process.
- Assisted with field service coordination, commissioning support, and machinery inspections while reinforcing customer-facing communication and technical trainer-style documentation practices.
- Contributed to sourcing reviews, procurement follow-up, and proposal preparation for maintenance activities, supporting commercial activity and spare part availability.

CERTIFICATIONS

MACHINE LEARING — *2024*
IIT Bhubaneswar

MATLAB — *2026*
ONRAMP

ANSYS — *2026*

STRUCTURES

EDUCATION

Bachelor of Technology, Aeronautical Engineering — *Chennai, Tamilnadu, India*
Hindustan institute of technology and science — 2023 - 2027 • GPA: 8.2
(FINAL YEAR)

PROJECTS

Resin Intelligence:

Real-Time Edge Al and NIR-Powered Autonomous Resin Monitoring and Closed-Loop Control for Wet Filament Winding

2026, Coimbatore, Tamil Nadu, India

Developed an Industry 4.0 AI/NIR-based real-time resin monitoring system for wet filament winding to replace manual resin-content verification and improve manufacturing consistency. Integrated NIR spectroscopy, Edge AI, real-time data acquisition, process monitoring, AI/ML, industrial automation, and PLC-based control concepts to monitor resin-to-fiber ratio and identify process deviations. Proposed a closed-loop control approach for corrective process adjustments based on real-time conditions, focusing on process optimization, quality assurance, operational effectiveness, continuous improvement, and reduction of process variation.

Slotted Ducted Decelerator:

Slotted Ducted Decelerator – CFD & Experimental Aerodynamic Analysis

Chennai, Taminadu , India

Conducted CFD and experimental analysis to evaluate aerodynamic performance of re-entry vehicles, strengthening engineering analysis and project management skills.

RC Aircraft Design:

Trivandrum, Kerala, India

Designed, fabricated, and tested an RC aircraft to gain practical aerodynamic, manufacturing, and product management experience. (IIST, Trivandrum)

ACHIEVEMENTS

Letter of Appreciation –

Recognized by the Head – Programme Management, Aeronautics

Recognized for developing Resin Intelligence, an AI/NIR-based Industry 4.0 process-monitoring concept focused on process optimization, business process improvement, and continuous improvement.

Runner-Up –

Shark Tank Competition

Recognized for business innovation, problem-solving, communication, technical presentation, initiative, leadership, and growth-strategy thinking, demonstrating a customer-oriented approach to developing and presenting an innovative solution.

Runner-Up

Science Expo

Recognized for developing and presenting Piezoelectric Energy-Harvesting Shoes, applying engineering design and analytical problem-solving to develop a practical energy solution with a focus on sustainability, innovation, and user needs.
